University of California, Davis

2014 - B.S. Computer Science
2016 - M.S. Computer Science
Research Project: Random testing of database engines

- Randomly generate test cases (SQL queries) in order to look for bugs in database engines
- Test for correctness by transforming queries to equivalent ones and comparing
- Can also test correctness by running queries on multiple engines

Programming Languages and Technologies

Python	C#
Kotlin	Google Cloud
Azure	DevOps
Kubernetes	Git
CI/CD	On-call
LaTex	Terraform

Personal Projects

Quest
github.com/calvin-li/Quest

- Android app I made to help me track tasks using the notification system
- Source code on Github, also on the Play Store

Zonar Systems, Inc

September 2024 - Present

Tech Lead, Vietnam OCI Team

- Technical lead for a contractor team in Vietnam. Directed their work and handled communications between them and Zonar side people
- Team worked on integrating third-party dual dashcam to record driver safety events. I helped the team adapt to constantly changing requirements and deliver on schedule
- Under my leaderhip, Zonar's V4 hardware was certified for CA's Clean Truck Check program, one of only 3 continuously connected devices certified for the J1979 port

Tech Lead, Vietnam Support Team

- Technical lead for the off-hours support team in Vietnam. Team provides on-call coverage for all the other Vietnam contractor teams
- Improved the teams' incident readiness and response times
- Trained them to be more comfortable with raising incidents

Senior SDE, Pipeline Team

- Contribute to new features and maintainance of the Zonar Pipeline (ZPL) team's various projects
- Team had over a dozen projects, ranging from legacy to brand new, focused on moving data around within the Zonar backend
- Quickly ramped up to help with on-call load, and worked on improvements to the teams monitoring and metrics to reduce alert noise

March 2023 - September 2024
Senior Software Engineer, Gateway Integrations team (formerly OEM)

- Helped develop Light Duty Telematics Control Unit (LDTCU) system, simpler, cheaper version of Zonar's existing product. Saw it through from planning to launch.
- Lead the development of the harsh acceleration/braking detection in LDTCU. Responsible for the process of translating raw data from device into events that can go into our backend database
- Mentored our summer intern and helped organize the company-wide hackathon.

March 2020 - March 2023
Software Engineer II, OEM team

- Helped plan and develop the OEM Platform, which generalized the data ingestion process and made it easier to onboard and maintain data sources

- Maintained existing OEM services and uplifted them to OEM Platform

Zume, Inc

November 2019 - March 2020
Software Engineer

- Worked on web app for tracking production at packaging factory

Microsoft Corporation

August 2017 - June 2019
Software Engineer, Microsoft Graph API

- Expanded service into new cloud environment (US government)
- Took ownership of our integration testing service
- Split time between feature development and maintenance of 4 nines uptime
- Part of the on-call rotation, maintained 4 nines uptime

June 2016 - August 2017
Software Engineer, Azure AD Graph API

- Implemented publisher domain verification to Applications API for app security
- Maintained legacy SDK and improved automation for updating to new versions. Also worked with users to transition them to successor product (Microsoft Graph)

June 2015 - September 2015
Software Engineer Intern, Microsoft Authenticator App (iOS)

- Added fingerprint authentication and Apple Watch integration
